

CAPABILITY STATEMENT

Braun Electronic Components, LLC is a Stocking Distributor of COTS electronic components that are both currently produced and those considered obsolete/previous generation(s).

CORE COMPETENCIES

Braun supports our clients with board-level COTS components and related materials that are third-party tested to AS6081 standards prior to delivery.

All materials supplied are covered with Braun's full 5-year warranty for form, fit, function, authenticity and new condition.

Braun partners with clients to provide solutions to shortages in current production as a core competency.

Additionally, Braun goes way past a simple transactional relationship to add robustness to our client's inventory management procedures, excess inventory dispossession processes and help institute forward-looking preventative practices, often leading to storage of safety stock for key customers with scheduled deliveries.

ADVANTAGES

Braun has a long, verifiable history of providing solutions to Fortune 100 companies around the world including Tier One vendors for the Automotive, Aerospace, Medical and Defense industries.

Examples of clients in these fields are Volkswagen, Brandywine Communications, Zoll Medical, and Northrop Grumman.

Past Performance Example: Department of the Navy NAVSUP FLT Log CTR Norfolk Details on FPDS.gov

CASE STUDIES

Northrop Grumman:

Required a current production part from Microchip, but could only use material that contained die from Micrel (the original manufacturer of the device prior Microchip's buyout).

Braun was able to identify the trace code specific to this die and procure and provide 20,000+ pieces to support Northrup Grumman's production which to that point had been on hold for over 6 months.

Caterpillar:

Braun was able to support Caterpillar with a \$1.6M 5-year supply of obsolete material with annual shipments to provide legacy support to heavy equipment controls.

Had the program not been in place, Caterpillar would have had to redesign or pay 5-8 times this cost as the shortage for material worsened over the last three years.
